piezomed

Extremely powerful and fast
The boost function can be used to increase the set basic power by 20 % for a short period of time.

The new force in bone surgery

Piezomed facilitates the surgeon's work: thanks to innovative ultrasound technology, only bone substance is resected with high precision. The surrounding soft tissue remains uninjured. A noticeable relief for the patient: less pain, quicker healing!

Innovative LED ring
The shadow-free light ensures ideal illumination of the operating site.

Improved cutting precision
A new, specialised tooth design guarantees precision cutting and saves time!

Efficient cooling
The spray exits near the instrument's area of activity and cools the operating site extremely efficiently.

Automatic instrument detection
Piezomed detects the inserted instrument and protects it against overloading.

Automatic instrument detection

A world first: as soon as an instrument is inserted, Piezomed automatically detects the instrument and assigns it to the correct power class. This not only facilitates operation but also increases safety. In addition, the risk of overloading the instruments is reduced and the service life of your instruments considerably extended!

Automatic instrument detection

Piezomed detects the instrument during insertion and sets the correct power class automatically.

Every instrument in its place

Clearly arranged and ready-to-use in practical instrument holders.

Sinus instrument

Detaches the Schneiderian membrane gently from the bone. It is also protected by the coolant film.

New special saw

The new bone saw amazes with its extremely high cutting performance. You work efficiently and save time!

New tooth design

Fine-toothed saw for fine cuts, with little bone loss when harvesting bone blocks.

Individual performance setting

The power can be changed manually within the detected power class.

Piezomed adapts to your style of working

Piezomed adapts to your personal way of working: The device saves your last selected settings and supports you with three individual operating modes: »Power«, »Basic« and »Smooth«. In addition, with its range of innovative instruments, W&H offers you the right instrument for every application.

Cooling right where it is needed

The supply of coolant through the instrument to near the operating point guarantees optimal cooling of the instrument and the hard tissue.

Practical foot control

The multifunctional foot control allows sterile working and optimal freedom for your hands.

»Power« operating mode

The handpiece's power is increased by increasing pressure on the instrument. (Boost function possible)

»Basic« operating mode

The handpiece power remains the same irrespective of the load on the instrument. (Boost function possible)

»Smooth« operating mode

The handpiece's power is reduced by increasing pressure on the instrument.

Flexible and ergonomic

Wireless foot control for controlling multiple W&H devices, such as Implantmed and Piezomed.

Absolute freedom of movement

With the wireless foot control you can select the optimum position in the work area without restrictions. This means complete safety in the treatment area.

One for all

Control the functions of the Implantmed and Piezomed with only one foot control.

Bone block harvesting
Ideal for the transplantation of intraoral bone blocks. For fine and deep cuts in record time!

Extraction with perioste
Even in complicated extractions, it is possible to avoid bone and soft tissue damage.

Micrometrical incisions
Piezomed permits minimally invasive operations with maximum surgical precision.

Surgical procedures have never been as quick and safe

Piezomed puts all the advantages of innovative ultrasound technology at your fingertips: High-frequency microvibrations allow cutting with incredible precision. In addition, with the so-called cavitation effect you can also ensure an almost blood-free surgical site. In other words: minimally invasive, maximally effective!

Lateral sinus lift
Atraumatic bone preparation and augmentation. Detachment of the membrane without perforating it.

Alveolar ridge splitting
The surgical incisions are precise and reliable, the surgical site free from blood.

Selective incisions
Protection of soft tissue: nerves, vessels and membranes are not damaged. Quicker healing process!

»Incredible easy to use in between
the Implantmed and the Piezomed.«

Prof. Dr. José Luis Calvo Guirado D.D.S, PhD, Eu PhD, M.S.,
oral surgeon, Spain

Technical data

Type:	SA-320
Mains voltage:	100 – 130 V / 220 – 240 V
Permissible voltage fluctuation:	±10 %
Rated current:	0.1 – 1.0 A / 0.1 – 0.5 A
Frequency:	50 – 60 Hz
Max. power consumption:	90 VA
Max. output power:	24 W
Coolant flow rate at 100 %:	min. 50 ml/min
Size (W x D x H):	256 x 305 x 109 mm
Weight:	7 kg
